Summary

Dynamic student at FAST-NUCES Karachi who builds backend services in C# and .NET Core and full-stack apps in React and Node. Comfortable with SQL Server and PostgreSQL, REST API design, and unit testing. Proven track record of transforming complex logic into clean, reliable, and maintainable software. Leading campus technical societies to engineer practical solutions in fast-paced team environments

Technical Skills

Languages: C#, C++, C, Python, JavaScript, TypeScript, SQL
Backend: ASP.NET Core, .NET Core Web API, Entity Framework Core, Node.js, Express.js
Databases: Microsoft SQL Server, PostgreSQL
Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS
Tools: Git, GitHub, Docker, Postman, Visual Studio, VS Code, xUnit
Concepts: Object-Oriented Programming, Data Structures & Algorithms, REST API design, Unit Testing, Agile

Education

FAST – National University of Computer and Emerging Sciences Karachi, Pakistan
BS Computer Science – CGPA 3.51 / 4.00, Dean's List *2022 – 2026*

- **Relevant Coursework:** Object-Oriented Programming, Data Structures & Algorithms, Database Systems, Software Engineering, Operating Systems.

Projects

Enterprise Resource Management System | *C#, .NET Core, SQL Server, EF Core*

- Built a .NET Core REST API with 12 endpoints for resource allocation and user authentication, backed by SQL Server through EF Core and covered by 35 xUnit tests.
- Designed the relational schema and wrote the SQL queries behind 8 tables, mapping transactions through EF Core.
- Put data access behind repository interfaces so the service layer could be unit tested without a database, reaching 85

SocioStruct: Society Management Web App | *PostgreSQL, Express, React, Node.js, Docker*

- Built a full-stack event management app for FAST University Students to handle event approvals, participant registration, and venue scheduling, with live participation updates over WebSockets.
- Added JWT login and wrote 16 REST endpoints used by the React frontend.
- Containerized the app with Docker and delivered it over 3 sprints with a team of 4.

StarSeeker: Multithreaded A* Pathfinding | *C, C++, Multithreading*

- Sped up A* grid pathfinding 3.8x and cut peak memory by 40% by parallelizing the search across threads and reworking the data layout, benchmarked on 2048x2048 grid maps
- Wrote the full path reconstruction and measured results against the single-threaded version.

Final Year Project: Deepfake Detection System | *Python, PyTorch*

- Built a video deepfake detector in PyTorch that combines spatial and frequency-domain features, reaching 0.9047 validation AUC on FaceForensics++ (C23).
- Served the model through a REST endpoint and built the feature extraction pipeline for facial spatial-frequency fusion and spectral anomalies

Leadership & Certifications

- **Director PR, FAST Data Science Society:** Led a team of 10, ran 3 technical workshops and events reaching 200+ students.
- **Student Council Head (O/A Levels):** Handled student representation and event planning.
- **Certifications:**; Machine Learning and Deep Learning Specialization (Coursera)
